

# Fusion GTB

NEXT-GEN BUTYRIC ACID

Butyric acid is an important player in poultry gut health. It is involved in the regulation of tight junction proteins, the expression of host defense peptides, and down-regulation of anti-inflammatory pathways. This translates to better feed efficiency, faster weight gain, and improved gut health for your birds.

Fusion GTB is a glycerol ester of butyric acid that provides a potent source of butyric acid without any of the handling and smell issues associated with coated salts. The unique ester form protects the butyric acid molecules through the upper gastrointestinal tract and gizzard. Once Fusion GTB enters the intestinal tract lipase cleaves the butyric acid from the glycerol backbone, delivering it to where it is most effective.

## Description

Fusion GTB is a triglyceride of butyric acid intended to serve as a source of butyric acid for poultry of all ages. Fusion GTB is heat stable for pelleted feeds.

## Product Characteristics

Appearance: White-yellow free flowing powder

Smell: Slightly acidic

Packaging: 25 kg bags

## Feeding recommendations

Broilers and Pullets

- Starter phase: 1 lb per ton of finished feed
- Grower and Finisher phases: 0.5 lb per ton of finished feed

Breeders and Laying hens

- Laying phases: 1 lb per ton of finished feed

Shelf life: 2 years

Storage: Store in original packaging in dry location out of direct sunlight.
