

QuickStart

START QUICK TO FINISH STRONG

Day 7 performance of broiler chicks given QuickStart after hatch compared to control

Early access to feed and water is critical to maximize bird health and performance. Long transport times can result in birds using the nutrition found in the yolk to survive. This means that vital maternal antibodies and lipids meant for cellular building blocks are used as energy, affecting immune status, growth performance, and inducing ketosis.

QuickStart is a proprietary blend of nutrients, palatants, and attractants designed to provide a highly digestible first meal during transport and prevent ketosis in young poultry. This results in improved feed intake, 7 day weights, and immune status.

Description

QuickStart is a perinatal nutrition supplement meant to prevent ketosis in young poultry during long transport times.

Product Characteristics

Appearance: Light green feed
Smell: Feed
Packaging: 15 lb bucket (30 lb hydrated)

Feeding recommendations

Hydrate before use. Mix 1:1 with water and apply to chick/poult transport boxes at a rate of 2-3 grams per bird.

Can also be used to top dress feed pans as an attractant. Hydrate and apply to feed at a rate of 1-3 grams per bird.

Shelf life: 1 year

Storage: Store in original packaging in dry location out of direct sunlight.
