

Velox-β

ENERGY WHEN IT'S NEEDED MOST

Weaning is the most stressful period in a pig's life. During this time the piglets' gut must adapt from a highly digestible liquid diet to a less digestible solid diet. Underdeveloped enzyme secretion, waning passive immunity, and bacterial dysbiosis can reduce the piglets' ability to absorb the nutrients it needs to thrive.

Velox-β provides a source of highly digestible lipids to give piglets the energy they need to repair their gut, increase feed intake, and perform to their max. The unique blend of triacylglycerides in Velox-β does not require bile emulsion or lipase activity for absorption across the gut and is rapidly transported to the liver for a ready source of energy.

Description

Velox-β is a proprietary blend of medium chain triacylglycerides intended to serve as an energy source for young piglets.

Feeding recommendations

Feed to piglets during the weaning phase as part of a complete ration.

- 3-5 lbs per ton of finished feed
- Heat stable for pelleted feeds

Product Characteristics

Appearance: White-yellow free flowing powder

Smell: Lightly fruity

Gross energy value: 3,025 kcal/kg

Packaging: 25 kg bags

Shelf life: 2 years

Storage: Store in original packaging in dry location out of direct sunlight.
