

LQS

POULT QUALITY THROUGH NUTRITION

Early feeding is one of the most effective ways to improve poult quality and can have lifelong effects on growth performance, immune status, flock uniformity, and feed conversion. Early feeding can also spare vital maternal antibodies and functional lipids lost during long transports, while also refilling muscle glycogen stores lost during hatching. The end result is a healthier and more precocious poult at arrival.

LQS is a blend of carbohydrates, proteins, vitamins and minerals, probiotics, and performance additives developed to support early poult nutrition. LQS is given at the hatchery via an automated delivery system. The automated delivery system ensures that each birds receives the same dose, improving flock uniformity. Speak to an FFI Representative today to discuss adding LQS to your poult program.

Description

LQS is a dry powder that is hydrated at the hatchery. LQS is a complete feed containing live probiotics and performance additives.

Application Recommendations

Turkey Poults: One bottle is intended to treat 1,000 turkey poults. Add one bottle to 900 ml of warm water and apply using specialized delivery system. Discard any remaining product after 4 hrs.

Product Characteristics

Appearance: White-tan free flowing powder
Smell: Protein smell
Packaging: 150 gram bottle

Shelf life: 18 months
Storage: Store in original packaging in cool temperature. Can be stored in the eggroom
